I'm a content-focused product marketer who has spent the better part of a decade shaping messaging and positioning for AI, observability, and developer platforms. My rare combination of software engineering skills and storytelling instincts enables me to translate complex concepts into compelling content that resonates with technical audiences, supports B2B SaaS launches, and drives pipeline growth.

Employment History

Edge Delta, Remote

Product Marketing Manager March 2025–April 2026

- Owned content quality for all marketing assets—landing pages, blogs, videos, social posts, emails, and e-books—ensuring technical accuracy and clear positioning for an AI-native observability platform
- Worked cross-functionally with Product and Sales to define ICPs, use cases, value propositions, and competitive differentiators, establishing the messaging framework that guided a full-funnel content program
- Developed, scripted, and produced product demos and webinars from end-to-end, appearing on camera and creating supporting video assets using AI tools without a dedicated video team
- Crafted targeted campaign messaging in partnership with Demand Generation, using performance data to refine positioning and support pipeline growth

Postman, Remote

Senior Content Marketing Manager September 2022–March 2025

- Developed and executed an educational content strategy for a developer audience, identifying knowledge gaps across 30+ topics and driving a 122% increase in non-branded traffic
- Owned a monthly product release newsletter, using A/B testing and performance metrics to improve engagement
- Created product pages in collaboration with Product Marketing, clearly communicating feature value to drive adoption
- Edited 3–5 blog posts per week, managing the editorial calendar and coaching writers to ensure clarity, accuracy, and consistency with Postman's voice

Datadog, Remote

Team Lead, Technical Content Editor March 2021–August 2022

Associate Editor May 2020–March 2021

- Managed a team of five writers and built repeatable content workflows to maintain quality across all written assets
- Wrote and edited technical content for developer audiences—including blog posts, case studies, research reports, and thought leadership pieces—leveraging deep knowledge of observability, security, and cloud infrastructure
- Worked closely with Product Marketing, Product, and Engineering to translate complex concepts into accessible prose while providing in-depth editorial feedback

Bustle Digital Group, New York, NY

Software Engineer September 2018–February 2020

- Built production-ready reusable and scalable components in React for use on all of BDG's properties, as well as its CMS
- Wrote and implemented Apollo Client queries and mutations to interact with BDG's GraphQL API

Penguin Random House, New York, NY
Assistant Editor July 2013–March 2018

- Line edited manuscripts and composed editorial letters to award-winning and best-selling authors
- Wrote book descriptions for marketing and retail use
